Experience

Software Development Engineer 1 | Signzy Technologies

Nov 2023 - Present

- Developed key features and maintained core backend logic that governs high-volume Yes Bank onboarding flows (Savings Account / Credit Card / Personal & Auto loan), processing **over 1000 daily users**.
- Achieved a **500ms reduction in P95 latency** for critical token/OTP flows by replacing non-atomic MongoDB locking with a high-performance, race-condition-free **Redis SETEX** strategy.
- Engineered a reliable, state-based task scheduler using **RabbitMQ (with TTL/DLQ)** to replace legacy cron processes, improving data consistency and guaranteeing task completion across distributed services.
- Implemented a **fault-tolerant retry mechanism** using **RabbitMQ** to manage intermittent failures with upstream dependencies, significantly increasing system resilience against external service outages.
- Contributed to the design and implementation of a **No-Code API Orchestrator (NCA)**, utilizing JSONata to rapidly configure services, which **reduced feature deployment time by 90%**.
- Helped implement a custom **version control** system for NCA with Bitbucket integration to enable automated deployments and generate diff reports.
- Tech-Stack:** TypeScript, Nodejs, Fastify, MongoDB, Redis, RabbitMQ, Kafka, MySQL

Freelance Software Engineer | Remote

Oct 2022 - Nov 2023

- Delivered end-to-end web solutions for private clients, owning the architecture, database design, and deployment on cloud services such as AWS/Hostinger/Vercel.
- Migrated backend services** from Spring Boot to Node.js, reducing infrastructure overhead and enabling faster Frontend/Backend integration.
- Implemented secure user authentication systems using JWT to enhance application security and user data protection.
- Integrated **secure payment gateways** such as Stripe and GoCardless APIs to enable transactions and recurring billing options.
- Tech-Stack:** Java, Javascript, Nodejs, Expressjs, SpringBoot, Reactjs, MongoDB, MySQL

Full-Stack Student Mentor | Acciojob

May 2023 - July 2023

- Provided full-stack mentoring to a cohort of **90+** students weekly, focusing on **Java, JavaScript, Reactjs**, and **SpringBoot** implementations.

Projects

SpringMart - eCommerce Backend | Java, Spring Boot, MySQL, JPA Hibernate, Docker, GitHub Actions

Repo

- Designed an eCommerce backend application with 37+ API endpoints, utilizing Hibernate ORM for MySQL database connection and DTOs to ensure data privacy and accessibility.
- Enhanced project scalability by containerizing it with Docker and implementing a CI/CD pipeline using GitHub Actions.

Creative Trading - Stock Monitoring App | Reactjs, HTML, SCSS, Finnhub API

Demo — Repo

- Developed a web application for stock analysis and monitoring using Reactjs and the Finnhub API, featuring seamless time-history analysis and live monitoring of foreign stocks through Apex Charts.

Technical Skills

Languages:	JavaScript, TypeScript, Java — Familiar: Python, C
Back-end/Frameworks:	Nodejs, Expressjs, Fastify, Spring Boot
Databases:	MySQL, MongoDB
Messaging/Async:	RabbitMQ, Kafka
DevOps/Cloud:	Docker, Kubernetes, AWS, GitHub Actions
Front-end:	Reactjs, HTML, CSS/SCSS

Education

Gujarat Technological University

June 2018 - July 2022

Bachelor of Engineering, CGPA: 8.6

Rajkot, Gujarat
